

EXTERIOR INSTALLATION INSTRUCTIONS

Your outdoor CEE chair comes with a hanging strap for a standard 8 ft. attachment, unless you have specified a ceiling height with your order. You may need to suspend a rope or chain from a tree limb or wherever you choose to hang the chair. Adjust your rope or chain so that the top of the strap's clip is approximately 8 feet above the ground. This will be comfortable for a person of average height. Check to see that the ropes are not crossed or twisted. Remove the strings.

The buckles on the hanging strap slide to fine tune the height of the chair. Slide buckles up or down, one at a time. They should both be opposite each other when finished.

To adjust the tilt, loosen the ropes along with the locking pin. Adjust length of front and rear rope by repositioning it on the locking pin. Retighten the ropes.

Should you choose to hang your CEE chair from your ceiling, a lag eye screw is provided. Although all components have been selected to support 500 lbs. It is also important to make sure that the chair is adequately secured to your ceiling. Please consult a professional if necessary. If an overhead beam is not visible, a tool called a stud finder, available in most hardware stores, can locate both edges of a joist. An alternate method is to tap the ceiling to determine roughly where it is hollow and where it sounds solid. Probing by feel with a small drill bit will help to locate the edges of the solid wood.

Using the 5/16" drill bit provided, drill your hole into the exact center of the joist. Insert the screw eye and twist with the help of a hefty screw driver or pliers handle. Continue until all threads are engaged in the wood.

If you have questions, please contact Tom or Jan at 715.792.5148

Disclaimer: The manufacturers and distributors of the CEE chair cannot assume responsibility for special, indirect or consequential damages or contingent liability for use of this product in a manner not expressly intended by the manufacturer. End consumer is ultimately responsible for verifying proper installation of the eye bolt and adjustment strap assembly according to our guidelines explained here within.
